

ELEVATORS FOR PALLETS

For inter-floor connection

- Interlevel connection
- Possibility of working in standard and frozen environments
- Increased level of safety in operations
- Fully automatic
- With storage on floors

Raise your quality: reliability and high performance

Pallet lifts represent a vertical handling solution of absolute reliability and high performance. Characterised by robust carpentry, these devices are designed to operate in demanding logistical environments, guaranteeing consistent and long-lasting performance.

Benefits

OPERATIONAL EFFICIENCY: operating individually and also connectable to other handling systems, the pallet lifts can reach heights of over 20 metres with the possibility of intermediate stops. Their ability to lift loads of up to 1500 kg with maximum efficiency makes them ideal for various industrial and commercial applications.

SPEED AND PRECISION: the lifting and lowering speed of the pallet lift is faster than a conventional hoist (up to one metre per second). Despite this speed, the precision of the stops is guaranteed, ensuring safe and smooth loading and unloading.

HIGH LEVEL OF SAFETY: the pallet lifts are equipped with advanced safety devices. Precise stops and stability when lifting and lowering loads help protect operators and the material being handled from damage and injury.

MACHINE DIRECTIVE COMPLIANCE: thanks to multiple safety systems, pallet lifts do not allow access to people. They can be installed without specific permits and without invasive structural work. Pallet lifts also do not require mandatory periodic maintenance.
